Student Responses

Answer the following questions

Question 1

Comment out the `asm` line. Run the program again to see what would happen. What do you observe that happens differently than before :

When commenting out the `asm` line, we see the CPU out of the WIFI State line being printed nonstop instead of approximately every second as before it was commented.

Question 2

In terms of CPU power consumption, what difference does the `asm` statement make?

In terms of CPU power consumption, when the `asm` statement is used, power consumption is reduced, as the CPU is put into a power-saving state and waits for interrupts. Without the `asm` line, it runs continuously using maximum power.
